

The
Future of Insulation
Just Turned
Greener

- Agri-based Renewable Materials
- Lower Utility Bills
- Healthier, Cleaner In-Home Environment
- Greater Noise Control

SEALECTION
Agribalance®
Spray Foam Insulation

There's a New Shade of **Green** in Residential Building

SEALECTION Agribalance® Spray Foam Insulation sets new standards of quality, energy-efficiency and performance for builders, architects, contractors and homeowners. Our semi-rigid, open-cell, polyurethane insulation's high R-value and ease of application have taken insulation performance to a whole new level. The open-cell foam accomplishes three goals: sealing out dust and pollen; reducing extraneous noise; and generating energy efficiency that noticeably lowers every month's utility bill.

Based in renewable natural resources, **SEALECTION Agribalance®** creates more energy-efficient homes by expanding to seal cracks, gaps and voids in attics, walls and ceilings. As a result, homebuilders and homeowners can use smaller, more energy-efficient heating and cooling units to achieve the same level of comfort.

SEALECTION Agribalance®'s semi-rigid, two-component formula creates a healthier, cleaner and quieter environment by reducing moisture intrusion and energy loss in homes. Plus, it tightly bonds with beams and surfaces in the attic, ceiling and walls to deliver a noise barrier that surpasses conventional insulation materials.

By maximizing use of renewable materials and reducing energy consumption, **SEALECTION Agribalance®** makes a profound impact on the environment, supports green building and creates healthy living spaces.
